ABOUT ME

Enthusiastic and curious 2026 Computer Science graduate from Vignan's Institute of Information Technology, Visakhapatnam, passionate about building web applications and exploring new technologies like AI and RAG systems. I love turning ideas into working products — from a phishing detector to an AI-powered resume screener — and I'm always excited to learn something new. As a fresher, I bring energy, adaptability, and a genuine eagerness to grow, along with the technical foundation to contribute meaningfully from day one. Open to relocation.

SKILLS

Languages: Python, SQL, JavaScript

Web Development: HTML5, CSS3, Flask

Databases: MySQL — schema design, queries, indexing

Python & Data: Pandas, NumPy, Matplotlib, Scikit-learn, NLTK — data processing & ML model building

AI / RAG: LangChain, OpenAI API, Vector Databases, Embeddings, Prompt Engineering

Tools & Deployment: Git, GitHub, VS Code, Jupyter Notebook, Railway — version control & deployment workflows

PROFESSIONAL EXPERIENCE

Python Full Stack Trainee

Dec 2025 – Present

Codegnan IT Solutions Pvt. Ltd., Vijayawada

- Building full-stack web applications end-to-end using Python, Flask, HTML, CSS, and JavaScript.
- Designing and querying MySQL databases — creating schemas, writing optimized queries, and integrating them with backend logic.
- Delivered hands-on training projects including CRUD applications and a personal portfolio website.

PROJECTS

Smart Resume Screening System (RAG-based)

2026

Python, LangChain, OpenAI API, Vector DB, Flask

- Built a Retrieval-Augmented Generation (RAG) pipeline that automatically screens and ranks resumes against a given job description using semantic search.
- Converted resumes and job descriptions into embeddings stored in a vector database, retrieving the most relevant candidate sections for each query.
- Used an LLM to generate match scores and short justification summaries for each candidate, cutting down manual resume screening effort.

Movie Review Sentiment Analyzer

2025

Python, NLTK, Scikit-learn

- Built an NLP model to classify movie reviews as Positive or Negative, trained on 50,000 real IMDB reviews.
- Applied text cleaning and TF-IDF vectorization, then trained and compared two ML models — achieving a best accuracy of 90.21%.
- Evaluated model performance using accuracy and confusion-matrix analysis to select the best-performing approach.

NOPhish – Phishing Link Detection Tool

2025

HTML, JavaScript, CSS

- Built a web tool that instantly flags whether a pasted link is Safe or a Phishing site, helping users avoid online scams.
- Implemented client-side JavaScript logic to detect suspicious URL patterns, fake login pages, and unusual domain structures.
- Designed a simple, user-friendly interface so anyone can check a link's safety in seconds without technical knowledge.

EDUCATION

B.Tech – Computer Science & Technology

2022 – 2026

Vignan's Institute of Information Technology, Vizag

Subjects: Data Structures, OOP, DBMS, Operating Systems, Machine Learning

Board of Intermediate Education (MPC)

2020 – 2022

Sri Chaitanya Junior College, Visakhapatnam

CERTIFICATIONS & COMPETITIVE PROGRAMMING

- Python Skill Test – CodeChef: Scored 93% (May 2026)
- CodeChef (nsai60224): 561 problems solved, Problem Solver Gold Badge, Rating 1108
- Certifications: Relational Database Basics | Data Analytics on AWS | Cisco Networking (2 certs)
